DETAILED ACTION

1. This Office Action is in response to the Response and Amendment filed May 26, 2006. Claims 2 and 13 were canceled and claims 1 and 3-12 are now pending.

Examiner's Amendment

- 2 An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CAR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Thomas F. Roland on June 8, 2006.

3. The application has been amended as follows:

In Specification, page 7, between line 6 and line 7, insert the following subtitle:

--BRIEF DESCRIPTION OF THE DRAWING--;

Cancel claim 12 without prejudice.

Allowable Subject Matter

4. Claims 1 and 3-11 are allowed.

Art Unit: 1713

5. The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest reference: Langstein et al. (US 2002/0086959 A1≅US 6,846,885 B2).

A cationic catalyst system comprising	
A	an initiator (I)
B	a catalyst (K)
C	a cocatalyst (CoK)
wherein the cocatalyst (CoK) is an agent which releases the polymerization active center from its counterion generated by the reaction between the catalyst (K) and the initiator (I)	

(summary of claim 1)

A process for the cationic polymerization of C₃₋₁₀ monomers in the presence of a catalyst system comprising	
A	an initiator (I)
B	a catalyst (K)
C	a cocatalyst (CoK)
wherein the cocatalyst (CoK) is an agent which releases the polymerization active center from its counterion generated by the reaction between the catalyst (K) and the initiator (I)	

(summary of claim 10)

Langstein et al. disclose a process to prepare isoolefin copolymer in the presence of zirconium halides, hafnium halides, or mixtures thereof and organic nitro compounds in a solvent suitable for cationic polymerization, wherein the solvent is halogenated hydrocarbon or a mixture of halogenated hydrocarbon and non-

Art Unit: 1713

halogenated hydrocarbon; and the organic nitro compound is R-NO₂ with R is C₆₋₂₄ - cycloaryl (abstract; [0011]-[0012]; claims 1-11). Thus, Langstein et al. do not teach or fairly suggest a cationic catalysis system comprising an **initiator (I)**, a catalyst (K), and a cocatalyst (CoK), wherein the cocatalyst (CoK) is an agent which releases the polymerization active center from its counterion generated by the reaction between the catalyst (K) and the initiator (I).

In light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
